SUMMARY

DevOps engineer with 5 years in Linux systems, cloud infrastructure, and release tooling. Spent most of it supporting hosted services for hosting clients including Hostway, Hostwinds, myhosting.com, and KuwaitNet. Automate OS patching and security hardening with Ansible, and build release pipelines in Jenkins and GitHub Actions. Most recent work is AWS and GCP infrastructure for a production AI platform on Kubernetes and Docker, where LLM APIs now handle first-pass diagnosis and auto-remediation of common incidents. Self-motivated and detail oriented - earned the AWS SysOps certification while working full time in a non-technical role.

EXPERIENCE

Infrastructure & Platform Engineer - Rail Tech Inc.

Remote | Dec 2024 - Apr 2026

- Ran AWS and GCP infrastructure for a production AI platform, roughly 20 servers.
- Wrote Ansible playbooks that patch and harden the fleet on a schedule. Nobody logs into servers one at a time anymore.
- Built the release pipelines in Jenkins and GitHub Actions that ship every service.
- Moved workloads onto EKS and Docker as traffic outgrew single hosts.
- Hooked OpenAI and Anthropic APIs into alerting to draft first-pass incident diagnoses. Routine restarts and disk cleanups now clear themselves.
- Carried the production pager. Triage, root cause, then the writeup.
- Reviewed cloud spend monthly and cut idle resources, holding the bill flat as usage grew.

Systems Engineer - Armia Systems Ltd.

India | Apr 2019 - Jan 2020

- Handled Linux and Windows servers for hosting clients, bare-metal and cloud both.
- Ran the patching and hardening rounds, plus the occasional emergency rebuild.
- On-call rotation for production. Led incident response through triage, fix, and recovery.
- Python and Bash scripts cut about 70% of the repeat manual work. Measured against the ticket queue before and after.

System Administrator - Brookwin Technologies

India | Dec 2016 - Mar 2019

- Supported server and cloud infrastructure for hosting providers, including myhosting.com and Hostway.
- Held 99% uptime across the systems I owned, tracked in our monitoring dashboards.
- Patched and hardened Linux and Windows boxes on a set rotation.
- Scripted the repetitive admin jobs so nobody had to remember the steps.
- Led the Level 1 team, training new engineers on escalation and triage.

Operations Supervisor - Urban Group

Toronto, Canada | Jan 2023 - Dec 2024

- Escalation point between frontline staff, vendors, and management. Fixed causes, not symptoms.
- Studied for and passed the AWS SysOps certification outside working hours.

SKILLS

Cloud: AWS (VPC, IAM, EC2, EKS, CloudWatch, S3, RDS, Route53), GCP

Containers & Orchestration: Kubernetes (EKS), Docker

Configuration Management: Ansible, OS patching automation, security hardening

CI/CD & Release Tooling: Jenkins, GitHub Actions, Git

Operating Systems: Linux administration (bare-metal and cloud), Windows Server

Programming & Scripting: Python, Bash, Shell

AI in Daily Work: OpenAI and Anthropic APIs, LLM-assisted debugging, auto-remediation of production incidents

Distributed Systems & Data: Kafka, Redis, PostgreSQL, MySQL, Oracle

Operations: Root cause analysis, incident response, on-call, monitoring, technical documentation

Languages: English (full professional), Hindi (working)

CERTIFICATIONS

AWS Certified SysOps Administrator - Associate (Feb 2025 - Feb 2028) | CompTIA A+ (Core 1)

EDUCATION

Cochin University of Science and Technology (CUSAT) - B.Tech, Electronics & Communication Engineering, 2011 - 2015

Centennial College - Diploma, Computer Systems Networking and Telecommunications, Toronto, 2020 - 2022
