SUMMARY

DevOps and infrastructure engineer with 5 years across Linux and Windows systems, hosting-provider production support and cloud infrastructure. Built and ran a Jenkins multibranch pipeline with Ansistrano releases and Ansible-based configuration management for hosting clients, carrying a production on-call rotation. Most recently ran a containerised AI platform on GCP: Docker Compose services behind Traefik and Cloudflare, with a Model Context Protocol server serving Claude Desktop, Cursor and Claude Code. Self-motivated and detail oriented - earned the certification while working full time in a non-technical role.

EXPERIENCE

DevOps Engineer - Rail Tech Inc.

Remote | Dec 2024 - Apr 2026

- Ran production infrastructure for an AI memory platform on GCP: four services under Docker Compose on a Compute Engine VM, with MongoDB, Redis and PostgreSQL behind them.
- Deployed and operated the platform's Model Context Protocol server on both SSE and Streamable HTTP transports, serving Claude Desktop, Cursor and Claude Code clients.
- Traced silent client disconnections to Cloudflare's ~100 second idle timeout on proxied connections and fixed it with a 25 second SSE keepalive.
- Owned the edge and authentication path: Cloudflare at the edge, Traefik for routing and Let's Encrypt TLS, ForwardAuth to a JWT verifier on every protected route.
- Flagged that IP-keyed rate limiting fails behind Cloudflare, which collapses users behind shared addresses; the limit moved to user ID.
- Stood up Prometheus and Grafana for platform metrics.
- Reviewed cloud spend monthly and cut idle resources, holding the bill flat as usage grew.
- Fully remote across time zones with a Toronto-based team, over Microsoft Teams and Zoom, with decisions and runbooks written down rather than held in a call.

Systems Engineer - Armia Systems Ltd.

India | Apr 2019 - Jan 2020

- Built and ran a Jenkins multibranch pipeline with an Ansistrano release layout, plus the branching and release plan, so deployment stopped depending on who remembered the steps.
- Wrote and ran Ansible playbooks against client servers for the patching and hardening rounds, replacing a per-host manual process.
- Handled Linux and Windows servers for hosting clients including KuwaitNet and Hostwinds, on bare metal and in AWS.
- Carried a production on-call rotation with out-of-hours pages: triage, fix, recovery, then the writeup.
- Python and Bash scripts cut about 70% of the repeat manual work, measured against the ticket queue before and after.

System Administrator - Brookwin Technologies

India | Dec 2016 - Mar 2019

- Supported server and cloud infrastructure for hosting providers including myhosting.com and Hostway, across bare metal and AWS.
- Held the contracted 99% availability target across the systems I owned, tracked in our monitoring dashboards.
- Patched and hardened Linux and Windows servers on a set rotation, including provisioning, configuration and rebuilds.
- Managed Windows Server and Active Directory to L3, and deployed and ran Windows application servers.
- Scripted the repetitive admin jobs so the steps did not live in anyone's head.
- Led the Level 1 team, training new engineers on escalation and triage.

Operations Supervisor - Urban Group

Toronto, Canada | Jan 2023 - Dec 2024

- Escalation point between frontline staff, vendors and management. Fixed causes, not symptoms.
- Studied for and passed the AWS SysOps certification outside working hours.

SKILLS

Cloud: AWS (EC2, VPC, IAM, S3, RDS, CloudWatch, Route 53), GCP Compute Engine

Containers & Configuration Management: Docker, Docker Compose, Ansible, OS patching automation, security hardening

CI/CD & Release Tooling: Jenkins multibranch, Ansistrano, Git, branching and release strategy

Operating Systems: Linux administration (bare metal and cloud), Windows Server, Active Directory

Web, Proxy & Application Infrastructure: Apache, Nginx, Traefik, IIS, Let's Encrypt and TLS, Cloudflare, FreeIPA

Monitoring & Logging: Prometheus, Grafana, CloudWatch, Splunk

Programming & Scripting: Python, Bash, Shell, PowerShell

Databases: MySQL, MongoDB, Redis, PostgreSQL, MSSQL, Oracle

Security & Access: SSH and PAM hardening, CSF, fail2ban, rkhunter, maldet, ClamAV, OSSEC, OAuth and JWT, IAM least privilege

AI in Daily Work: Model Context Protocol (SSE and Streamable HTTP), LLM-assisted debugging and documentation

Operations: Root cause analysis, incident response, on-call, monitoring, technical documentation

Remote Work: Virtual collaboration via Microsoft Teams and Zoom, time management, document management, time-zone adaptability, remote onboarding and training

Languages: English (full professional), Hindi (working)

CERTIFICATIONS

AWS Certified SysOps Administrator - Associate (Feb 2025 - Feb 2028) | CompTIA A+ (Core 1), Nov 2023

EDUCATION

Centennial College - Diploma, Computer Systems Technician - Networking, Toronto, 2020 - 2022

CUSAT, Cochin University of Science and Technology - B.Tech, Electronics & Communication Engineering, 2011 - 2015
